

Appl. No. : 10/715,046
Amdt. dated December 20, 2004
Reply to Office Action of Sep. 22, 2004

Amendments to the Claims:

We claim:

1. (Original) An apparatus for holding paintballs and supplying them to a paintball gun comprised of:

a first hollow chamber, an exit, a second hollow chamber, a gate between said first and second hollow chambers, and a fill port;

wherein said first chamber is located above the level of the breech of the gun and runs from a point forward of the breech to a point behind the breech and has a bottom shaped to guide the paintballs to said exit;

wherein said exit is in communication with the paintball gun breech and guides the paintballs to the breech;

said second hollow chamber being in communication with said first hollow chamber at the rear of said first chamber and extending back therefrom;

said gate located between said first and second chambers operating in only one direction

Appl. No. : 10/715,046
Amdt. dated December 20, 2004
Reply to Office Action of Sep. 22, 2004

to allow paintballs in said second chamber to flow from said second chamber to
said first chamber but not the other way;

and said fill port serving as a means for loading paintballs into either said first or said
second chambers.

2. (Original) The apparatus of claim 1 wherein the apparatus is designed to couple with a
paintball gun
such that the combined assembly features the general appearance of a
conventional firearm.
3. (Original) The apparatus of claim 1 wherein an additional gate is located adjacent the
breach in said
first chamber and operates to prevent paintballs from rolling away from the
breach when the gun is held at a significant angle from horizontal.
4. (Original) The apparatus of claim 1 wherein said second hollow chamber is separable
from said first hollow chamber and interchangeable with a like second hollow
chamber.

5. (Original) An apparatus for holding paintballs and supplying them to a paintball gun comprised of:

a first hollow chamber mounted above the breech of the gun and extending from a point forward of the breech to a point to the rear of the breech and having a bottom shaped to guide the paintballs to an exit leading to the gun breech;

a second hollow chamber in communication with the rear of said first hollow chamber, extending back from said first hollow chamber;

a gate between said first and said second hollow chamber that operates to allow paintballs to flow from said second chamber to said first chamber but not the other way;

and a fill port in said apparatus allowing paintballs to be loaded therein.

6. (Original) The apparatus of claim 5 wherein an additional gate is located adjacent the breech in said first chamber and operates to prevent paintballs from rolling away from said

breech when the gun is held at a significant angle from horizontal.

7. (Original) The apparatus of claim 5 wherein said apparatus is designed to couple with a paintball

gun such that the combined assembly features the general appearance of a conventional firearm.

8. (Original) The apparatus of claim 5 wherein said second chamber is shaped to serve as the shoulder

stock of a rifle.

9. (Original) The apparatus of claim 5 wherein said second hollow chamber is separable from said first

hollow chamber and interchangeable with a like second hollow chamber.

14. (Canceled)

15. (Canceled)

16. (Currently Amended) A paintball gun of the type having a gas operated bolt action, said paintball gun having two paintball hoppers integrally built into it, comprising;

comprising a first hopper and a second hopper with a gate between them;

said first hopper being above the level of the breech and in communication with the breech and extending substantially over the operable length of the gun from the barrel to the rear of ~~the~~ said bolt action and having its bottom interior shaped to guide the paintballs into the breech;

said second hopper being in communication with the rear of the first hopper and extending back therefrom;

said gate being disposed between said first and second hoppers and operating so as to allow paintballs to flow from the second hopper to the first hopper but not the other direction;

and said second hopper having a port which may be used to fill the paintball gun.

17. (Original) The paintball gun of claim 16 wherein a second gate is located in said first hopper at
the breech and operates so as to prevent the paintballs from rolling away from the breech when the paintball gun is tilted substantially from horizontal.
18. (Original) The paintball gun of claim 16 wherein said integral hoppers are designed such that the
paintball gun features the general appearance of a conventional firearm.
19. (Original) The apparatus of claim 16 wherein said second hopper is separable from said first
hopper and interchangeable with a like second hopper.
20. (Currently Amended) A paintball gun of the type having a gas operated bolt action, said paintball gun featuring three paintball hoppers integrally built into it, comprising;
a first hopper, a middle hopper, a second hopper, and a first and second gate therein;
said middle ~~portion~~ hopper being above the level of the breech and in

communication with the breech and extending substantially over the operable length of the gun from the barrel to the rear of the bolt action and having its bottom interior shaped so as to guide the paintballs into the breech;

said second hopper being in communication with the rear of the middle hopper and extending back therefrom;

said first gate being disposed between said middle and second hoppers and operating so as to allow paintballs to flow from the second hopper to the middle hopper but not the other direction;

said first hopper being in communication with the front end of the middle hopper and extending forward;

said second gate being disposed between the middle and first hopper and operating so as to allow the paintballs to roll from the first hopper to said middle hopper but not the other direction, unless said second gate is held open for the purpose of filling the first hopper;

Appl. No. : 10/715,046
Amdt. dated December 20, 2004

and said second hopper having a port which may be used to fill the paintball gun.

21. (Original) The paintball gun of claim 20 wherein a third gate is located in said middle hopper at
the breech and operates so as to prevent the paintballs from rolling away from the breech when said paintball gun is tilted substantially from horizontal.
22. (Original) The paintball gun of claim 20 wherein said second hopper is shaped like the shoulder
stock of a long gun.
23. (Original) The paintball gun of claim 20 wherein the second hopper is separable from said middle
hopper and interchangeable with a like second hopper.
24. (Original) The paintball gun of claim 20 wherein said first hopper extends forward under the
barrel and is shaped like the forestock of a long gun.
25. (Original) The paintball gun of claim 20 wherein said first hopper extends forward along

the

barrel and is shaped like a second barrel as in a gun having an over and under barrel arrangement.

26. (Original) The paintball gun of claim 20 wherein said first hopper has an upper portion and a

lower portion;

said lower portion extending forward under the barrel and being shaped like the forestock of a long gun;

and said upper portion extending forward along the barrel and being shaped like a second barrel as in a gun having an over and under barrel arrangement.

27. (Original) The paintball gun of claim 20 wherein said first hopper is separable from said middle

hopper and interchangeable with a like first hopper.

28. (Original) A paintball gun featuring three paintball hoppers integrally built into it;

Appl. No. : 10/715,046
Amdt. dated December 20, 2004
Reply to Office Action of Sep. 22, 2004

comprising a first hopper, a middle hopper, a second hopper, and a first and second gate therein;

said middle hopper being above the level of the breech and in communication with the breech and extending substantially over the operable length of the gun from the barrel to the rear of the bolt action and having its bottom interior shaped so as to guide the paintballs into the breech;

said second hopper being in communication with the rear of the middle hopper and extending back therefrom;

said first gate being disposed between said middle and second hopper and operating so as to allow paintballs to flow from the second hopper to the middle hopper but not the other direction;

said first hopper being in communication with the front end of the second hopper and extending forward;

said second gate being disposed between said second and first hoppers and

operating so as to allow the paintballs to roll from said first hopper to the second hopper but not the other direction, unless said second gate is held open for the purpose of filling the first portion;

and said second hopper having through its surface a port which may be used to fill the paintball gun.

29. (Original) The paintball gun of claim 28 wherein a third gate is located in said middle hopper at
- the breech and operates so as to prevent the paintballs from rolling away from the breech when the paintball gun is tilted substantially from horizontal.
